TEST	RESULT	REFERENCE RANGE
Widal Method:	Slide Method	
Salmonella typhi 'O':	No Agglutination.	
Salmonella typhi 'H':	No Agglutination.	

INTERPRETATION

- (1) 'H' & 'O' agglutinins appear in the serum after 10 days. Increase into peak in third to fifth week.
- (2) Usual criteria for diagnosis is both 'O' and 'H' 1:80 or more.
- (3) Positive reaction could occur on account of typhoid vaccination or previous typhoid and Dengue infection.
- (4) Rising titre may be necessary for proper evaluation.
- (5) Early treatment with specific drug may cause titre to remain negative.
- (6) Increase in 'O' titre may reflect infection with any Salmonella organisms.
- (7) Urine or Stool culture is preferable when illness of more than four weeks duration.
- (8) Result of slide technique **always be confirmed by tube technique or blood culture, typhoid card test.**
