Prediabetic : 5.7 - 6.4 %
Excellent Control : 6.4 - 7.0 %
Good Control : 7.0 - 8.0 %
Action Suggested : > 8.0 %

Method: Glycosylated Hemoglobin Test (HbA1c) is performed by the Gold Standard Reference, High Performance Liquid Chromatography (HPLC) from Bio-Rad, USA.

Instrument: D-10, Bio-Rad from France

Average Blood Sugar Level: 108.28 mg/dl

Comment:

Glycosylated Hb [Hb A1c] is used to assess long term Blood glucose control in diabetics.
- Hb A1c values reflect the average Blood glucose level present over the previous 2 - 3 months. Hb A1c is free of day fluctuations, & is unaffected by recent food intake.
- The risk of microalbuminuria & microangiopathic lesions of diabetes mellitus including retinopathy & glomerulopathy increases with Hb A1c levels over 8% [corresponds roughly to average Plasma glucose values of over 207 mg/dl]. Hemolytic anaemia may result in a decrease in the HbA1c level, whereas an increased level of Hb-F in a falsely elevated Hb A1c level.
